(57) **ABSTRACT**

A method and gaming assembly to play a variation of the game baccarat, the gaming assembly including a computer processor assembly, a display assembly and at least one user actuatable selector assembly. The computer processor assembly is structured to generate a player's hand and a banker's hand in accordance with rules of baccarat, one of those hands being designated the user's hand. Further, the computer processor assembly is structured to determine a winning hand in accordance with the rules of baccarat, designating the user as a winner if the user's hand is also the winning hand. Additionally, the computer processor assembly is structured to monitor consecutive ones of the user's hands and to indicate a bonus payout to the user in the event that consecutive ones of the user's hands have a final number count equal to a natural nine.
