(57) **ABSTRACT**

A gaming assembly to play a variation of the game baccarat, the gaming assembly includes a computer processor assembly, a display assembly and a user actuatable selector assembly. The computer processor assembly generates a player's hand and a banker's hand in accordance with rules of baccarat, one of those hands being designated the user's hand, and subsequently determines a winning hand in accordance with the rules of baccarat, designating the user as a winner if the user's hand is also the winning hand. Additionally, the computer processor assembly monitors consecutive ones of the user's hands and indicates a bonus payout to the user in the event that consecutive ones of the user's hands have a final number count equal to a natural nine, and during game play may allow one of the initial cards that comprise the player's hand or the banker's hand to be discarded in exchange for a new card to complete the initial hand.
